

La Malga

Since 1998, the historic building born in 1921 only for the purpose of summer hill country for 230 heads of livestock, all property of families from Auronzo, has been reorganized so that it can be open the whole year, like a real maso of Alto Adige. We are proudly the higher placed stable in Veneto, at an altitude of 1815 mt, and even in winter we have cows, horses, chickens, donkeys and pigs, for a total of 50 heads of livestock, that during the summer (10 June – 20 September) reach the number of 100, with cows, bullocks and horses from Cadore and Pusteria, that contribute to the maintenance of 100 hectares of meadow and brushwood. The whole pasture that surrounds the malga is crossed by easy tracks the use of which is due to the sheep farming that give us meat and milk all year long. At the same time (from spring to fall), the company utilizes the horses to perform environmental recovery on uncultivated grounds or where it is impossible to mow with mechanical means. In the last couple of years the company has enlarged its field of activity undertaking small works of forestry maintenance (wood cleaning, environmental restoration) with the intent to improve wood industry, with the production and the use of woody biomasses.
